

A

LOW-FREQUENCY-DERIVED SWAP

C_{low} and W_{low} select target {8}

Condition	Noise range / level (σ)	Mem. rate
EDM-1K no swap	[0.002, 80]	83.98% (215/256)
EDM-50K no swap	[0.002, 80]	0.00% (0/256)
<i>EDM-1K recipient <- EDM-50K donor (suppression)</i>		
before control {7}	$\sigma = 5.3152$	80.08% (205/256)
TARGET {8}	$\sigma = 3.2568$	73.44% (188/256)
after control {9}	$\sigma = 1.9233$	71.09% (182/256)
<i>EDM-50K recipient <- EDM-1K donor (induction)</i>		
before control {7}	$\sigma = 5.3152$	0.00% (0/256)
TARGET {8}	$\sigma = 3.2568$	0.00% (0/256)
after control {9}	$\sigma = 1.9233$	0.00% (0/256)

Low-derived suppression did not pass the preregistered influence criterion.

At listed calls, the donor replaces the recipient's whole denoiser; no Fourier component is swapped.

B

HIGH-FREQUENCY-DERIVED SWAP

C_{high} and W_{high} select target {9,10}

Condition	Noise range / level (σ)	Mem. rate
EDM-1K no swap	[0.002, 80]	83.98% (215/256)
EDM-50K no swap	[0.002, 80]	0.00% (0/256)
<i>EDM-1K recipient <- EDM-50K donor (suppression)</i>		
before control {7,8}	[3.25682, 5.31519]	65.23% (167/256)
TARGET {9,10}	[1.08817, 1.92334]	55.08% (141/256)
after control {11,12}	[0.29644, 0.58535]	66.41% (170/256)
<i>EDM-50K recipient <- EDM-1K donor (induction)</i>		
before control {7,8}	[3.25682, 5.31519]	0.39% (1/256)
TARGET {9,10}	[1.08817, 1.92334]	0.39% (1/256)
after control {11,12}	[0.29644, 0.58535]	0.39% (1/256)

Only high-derived suppression passed the preregistered target-versus-control influence criterion.

At listed calls, the donor replaces the recipient's whole denoiser; no Fourier component is swapped.
